

Case-Study

Sabir Lashari – A Child at Stake

A thoughtful student, who aimed to be an achiever, Sabir Lashari was diagnosed with Hepatitis B+ve at the age of 15. He is a slim lad, with a very creative imagination. He only dreams of acquiring higher education while qualifying with good grades.

His dreams got shattered when Sabir was detected with Hepatitis two years ago. However, his high spirits to fight this disease and get back to his normal life was remarkable. OSDI under its Hepatitis Prevention & Control Program provided him with medical treatment and care. The health officials made it a point to constantly make follow up visits at his home and enquire about his health progress.

Sabir remained committed to his dreams and took medicines on time. Though the progress was gradual but he knew he had to go a long way to acquire higher education and support his family. He is like many such patients who have been successful to overcome this disease along with OSDI's support in providing them medical assistance in the community of Kamal Khan Lashari, district Khairpur.

After overcoming this disease Sabir has once again joined his school and is living a healthy life. He is obliged to OSDI for improving his life.
